

Docker, Docker-Compose and Kubernetes Exam

Name: Hanil Zarbailov

Task 1: run with docker-compose:

Crypto Price Tracker

Fetch Prices

BITCOIN: \$87922 - Saved to database: true

Website is accessible from localhost:5002 (FE port).

Task 2: run with kubernetes:

```
ubuntu@ip-172-31-30-126:~/workarea/devopshift/devopshift-welcome/exam-code/kubernetes$ kubectl get svc
NAME                                TYPE                CLUSTER-IP      EXTERNAL-IP  PORT(S)          AGE
exam-be-clusterip                   ClusterIP            100.67.167.46    <none>        5001/TCP          37s
exam-fe-lb                           LoadBalancer         100.70.101.190   <pending>     80:31339/TCP      82s
exam-mysql-clusterip                 ClusterIP            100.65.177.81    <none>        3306/TCP          52s
kubernetes                           ClusterIP            100.64.0.1        <none>        443/TCP           3h57m
```

I couldn't get it to work because there were no available load balancers at the moment.
